Summary

Full-stack developer with hands-on experience building end-to-end web applications using React, TypeScript, Node.js, and MongoDB/PostgreSQL. Strong backend fundamentals with experience in authentication, REST APIs, real-time features, and state-driven frontend development. Actively building production-style projects with focus on clean architecture and scalability.

Education

B.Tech in Computer Science Engineering
IILM University | 2024-2028

Skills

Frontend: React, Next.js, TypeScript, Tailwind CSS

Backend: Node.js, Express, REST APIs, Authentication

Databases: MongoDB, PostgreSQL, Prisma

Tools: AWS, Docker, Git, GitHub

Languages: JavaScript, TypeScript

Projects

SketchSpace - Full Stack Web Application

(Nodejs, Express, WebSockets, NextJS, PostgreSQL)

- A Real-Time application that allows multiple users to join a room and draw on a same canvas.
- JWT Authentication for both HTTP and WebSocket server (no unauthorized user can join connection)
- Raw Canvas element used for drawing, tracking mouse up/down event.
- Features-in-progress: undo-redo, more shapes, status for active users in room.

Second Brain - Full Stack Web Application

(React, TypeScript, Node.js, MongoDB)

- Built an end-to-end application to store and organize content from YouTube and Twitter in a centralized dashboard
- Implemented authentication, protected routes, and REST APIs for content creation and retrieval
- Designed backend data models and API architecture for scalable content management

Developed a state-driven frontend with reusable components and clean UI structure
